

INTELLISCRUB™ 2.0

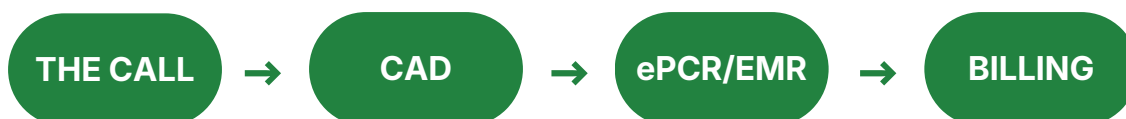

Connect Your Data. Automate Your Revenue Cycle.

Every EMS call generates valuable data across CAD, ePCR/EMR, and billing systems. **IntelliScrub™ 2.0** creates the intersection, bringing that data into the revenue cycle to help automate how accounts are evaluated, resolved, and routed before claim submission.

Using machine learning, configurable rules, and custom workflows, IntelliScrub helps address complex claim issues earlier while reducing manual intervention.

The Result: A smarter, more automated approach to resolving accounts before they become downstream billing problems.

FROM THE CALL TO THE CLAIM

IntelliScrub™ 2.0 Creates the Intersection

VERIFY

Primary insurance information verification.

SEARCH

Secondary Medicare or Medicaid coverage discovery.

ENRICH

Patient demographics and insurance discovery enrichment.

APPLY

Custom rules for origin/destination, facility, service level, Medicare/Medicaid, and medical necessity.

ROUTE

Accounts requiring special handling into the appropriate billing workflow.

MACHINE LEARNING

Automation + Custom Workflows working within your process.

More Than a Claim Scrubber

Most claim scrubbers identify problems. IntelliScrub helps resolve them. Instead of simply flagging an account for someone to work, IntelliScrub uses available data and organization-specific workflows to automate complex claim handling before submission.
